

widget

```
graph BT; widget[widget] --|> container[container]; container --|> layout[layout]; layout --|> colorselector[colorselector];
```

The diagram illustrates a class hierarchy with four levels. At the top is the 'widget' class. Below it is the 'container' class, which inherits from 'widget'. Below 'container' is the 'layout' class, which inherits from 'container'. At the bottom is the 'colorselector' class, which inherits from 'layout'. Each inheritance relationship is represented by a vertical line with an open triangle arrowhead pointing towards the superclass.
